

# Depth Correction Residual Uncertainty

Angus Jamieson

# What are the causes of Depth Error

- Referencing
  - Tides
  - GPS Height
  - Slips Position
  - Datum Uncertainty

- Mechanical Stretch
- Thermal Stretch
- Differential Pressure

- Taping Errors
- Tally
- Jetting Lift
- Rounding
- Telescopic Components
- Pipe Deformation

# The Stretch Error Term in ISCWSA

<b>Error Source</b>	<b>Error Proportional to</b>	<b>Error</b>
Random reference	1	0.35 m
Systematic reference	1	0 m
Scale	$D$	$2.4 \times 10^{-4}$
Stretch type	$D \cdot D_v$	$2.2 \times 10^{-7} \text{ m}^{-1}$

# How does that affect my well?

- A 10,000ft TVD well with 15000ft MD will have a depth underestimate of

33 ft

# Let's Pick two errors to Correct For

## 1. Mechanical Stretch

Integrate the effect of all forces acting on each finite element to determine the strain stretch at each survey depth and correct in the field

- requires  
BHA weight    Mud Weight  
Pipe Weight    Coeff Friction  
just as for torque and drag

## 2. Temperature Effects

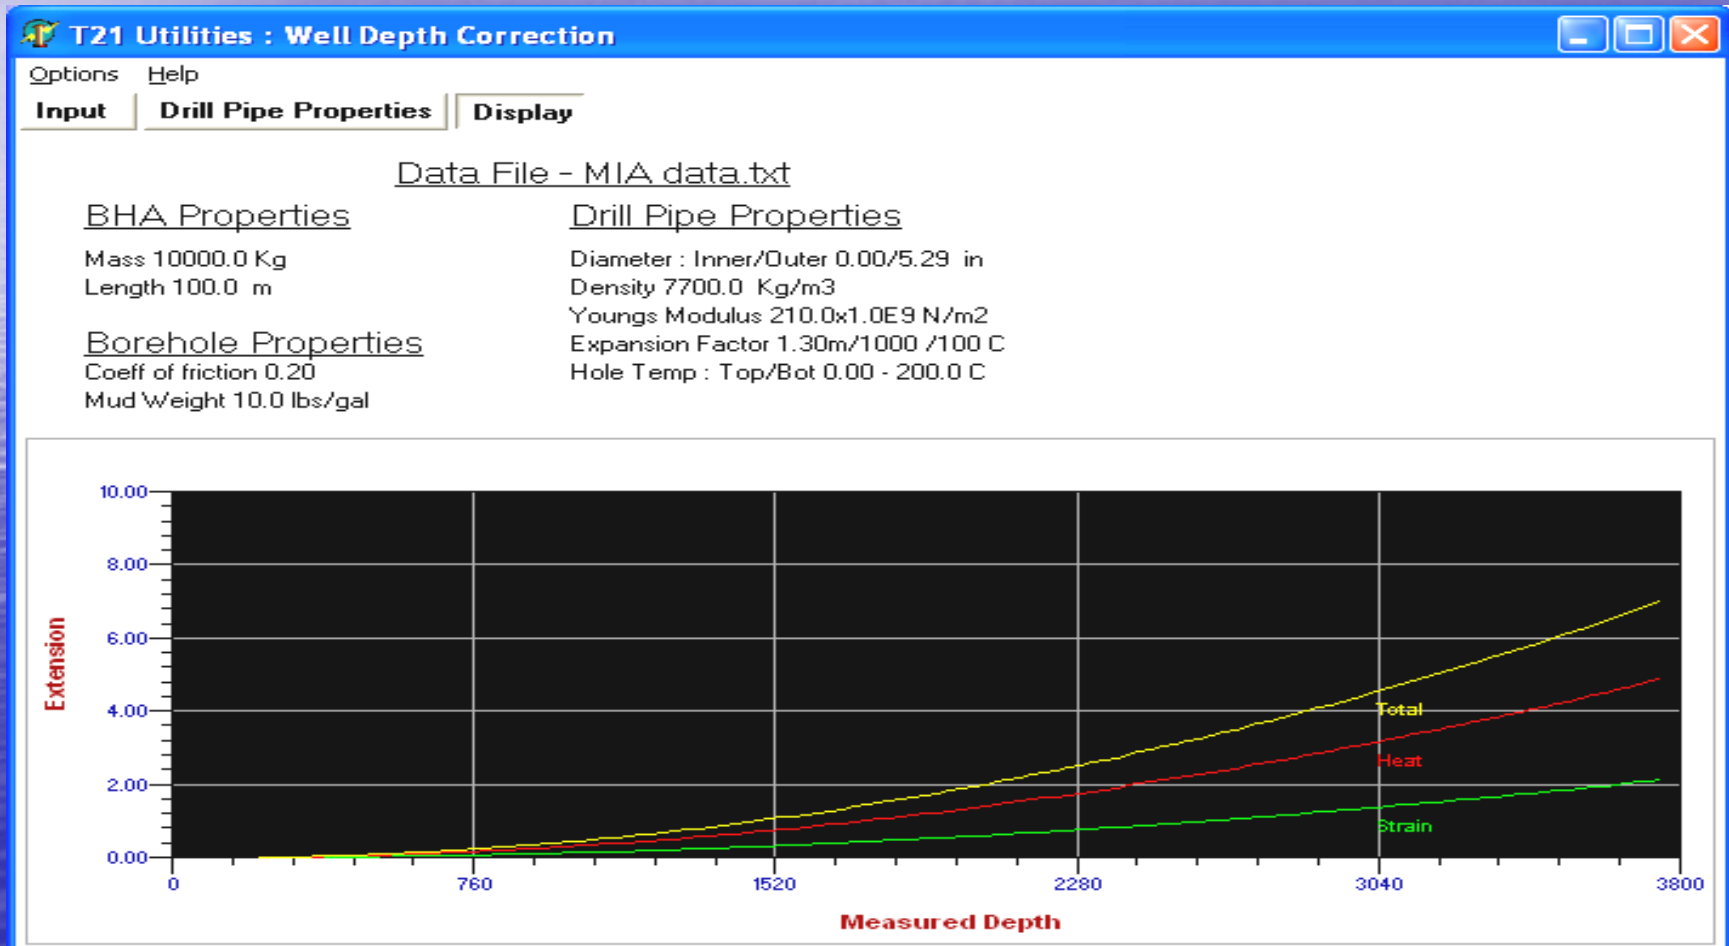

- Steel will stretch by

1.3m / 1000 / 100 degs C

# Depth Correction Software

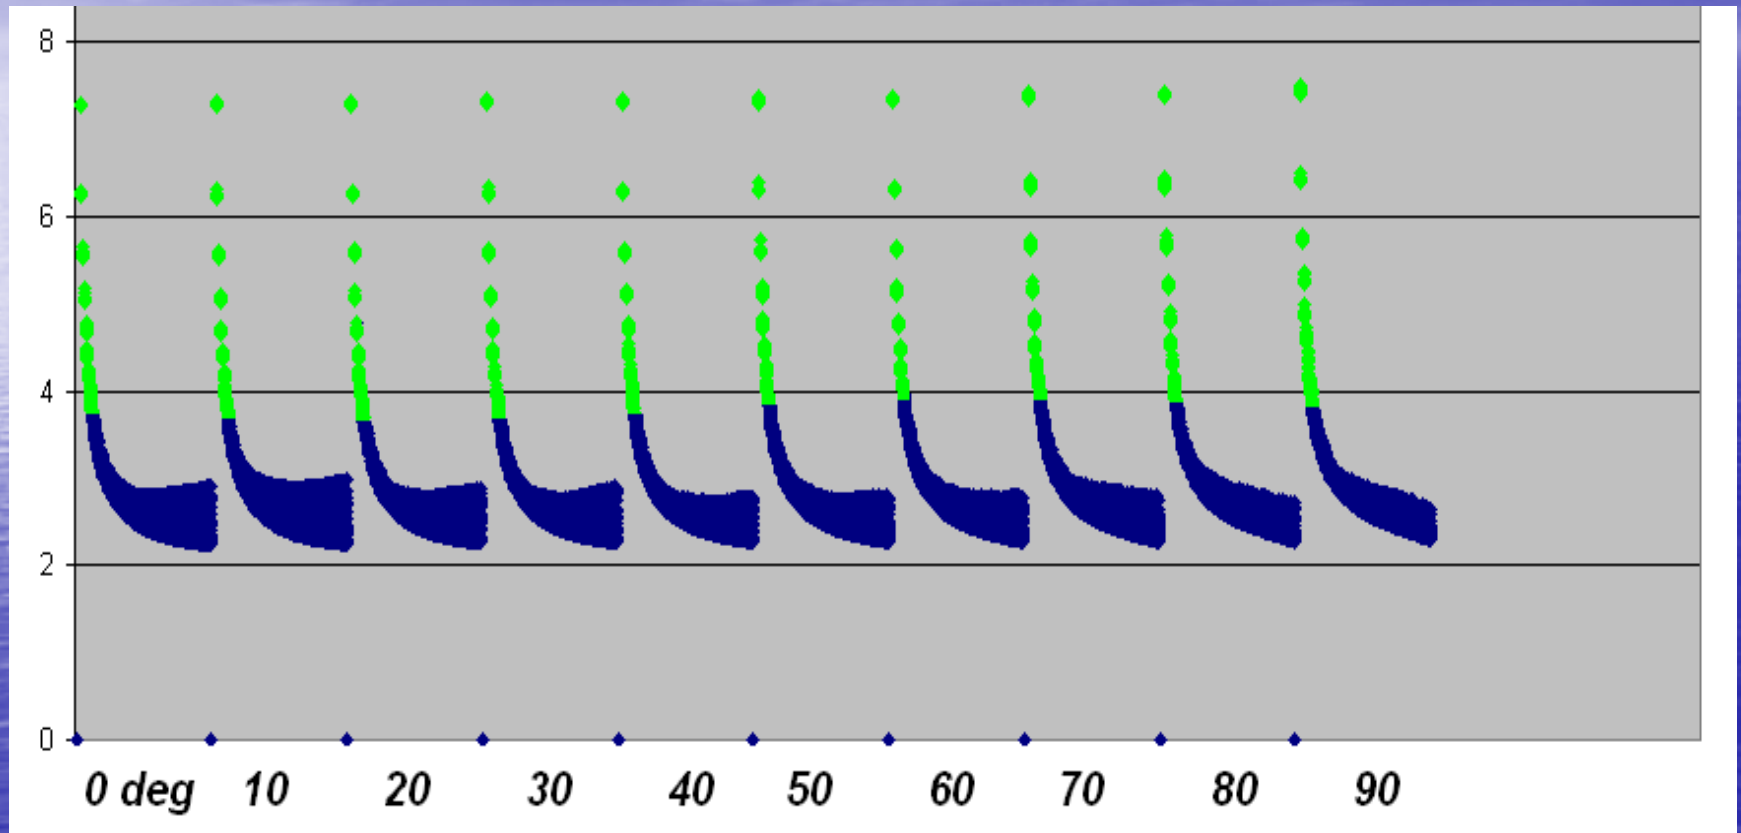

# Depth Err / ( Meas D x TVD )

# How does it vary in other wells?

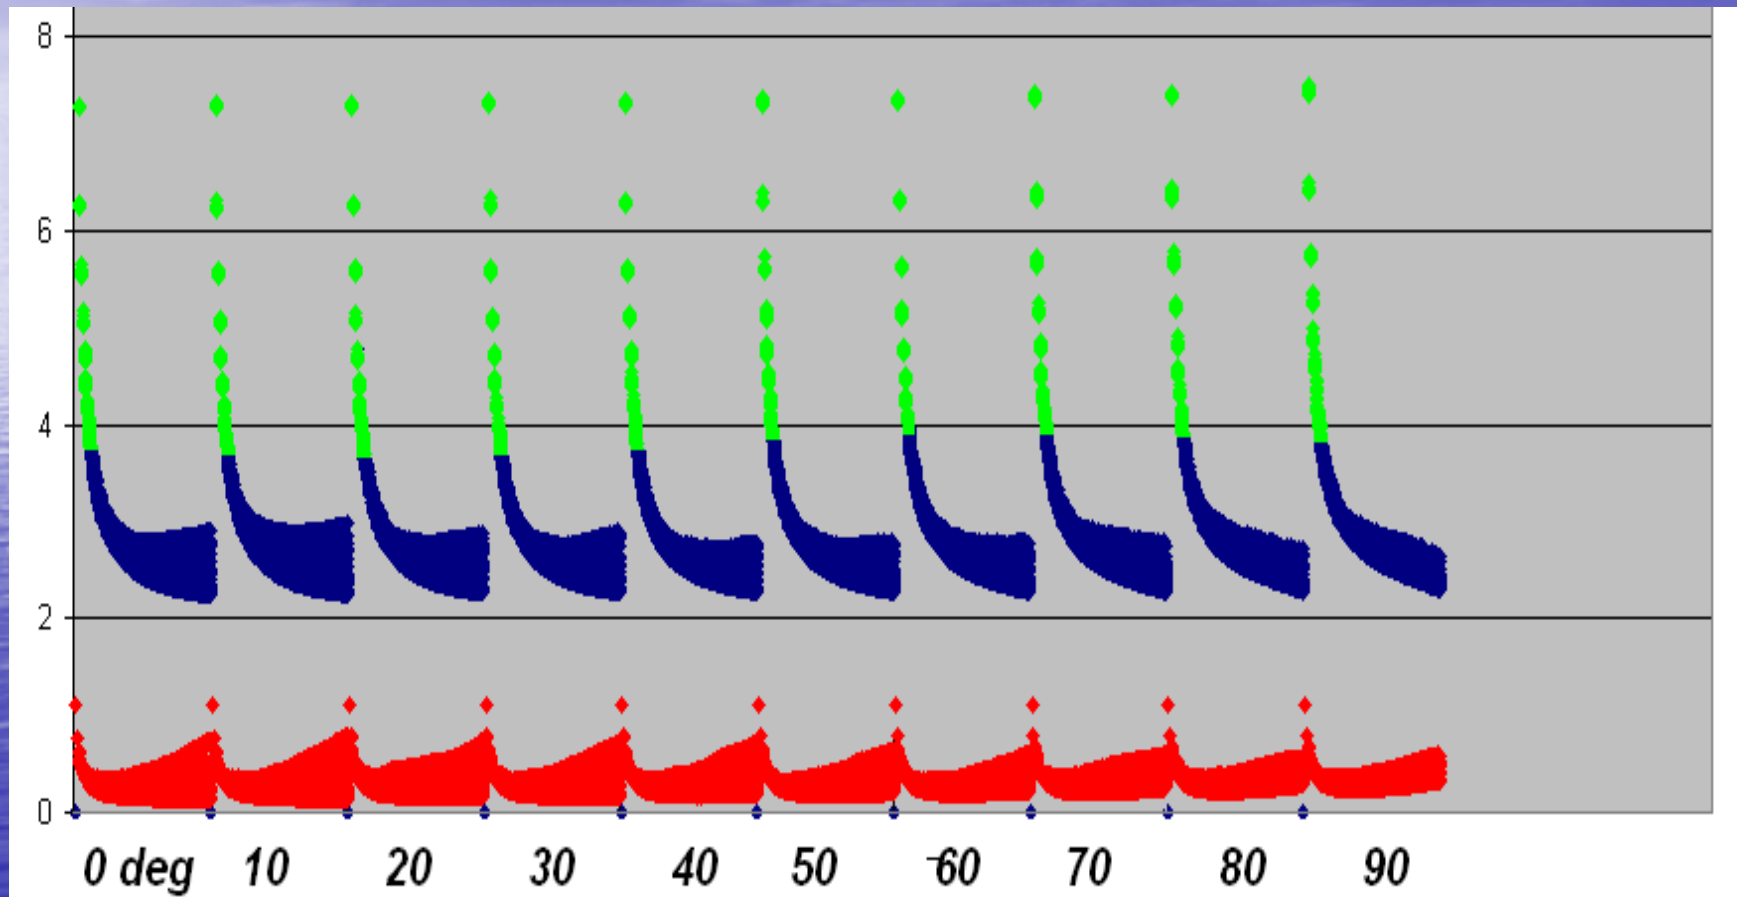

# If I Correct for Heat & Strain What am I left with ?

- Assumptions

- Coeff of friction estimate only good to 0.1
- Temperature Measurement good to 20%
- BHA Weight good to 10%
- Mud Weight good to 10%
- Taping error small and random

# Residual Uncertainty $Derr/DDv$

# Conclusions

- The current error model approximation is good over a wide range of geometries.
- The largest effects are Strain and Heat
- A Depth Correction Algorithm will remove approximately 70% of depth error

BUT .....

# Be Careful !

- More science is needed to reduce Depth Error further and PROVE the assumptions
- Be VERY careful about Depth Error Correlation.
  - If all wells drilled with similar geometry and similar BHAs the relative errors may be small
  - Wirelines shorten when you heat them and drillpipe lengthens so a wireline logging pick in a drillpipe survey may be a long way out.
